SUMMARY

I build web products that hold up: Angular and React on the front, Node and C# behind it, and tests that say what “done” means.

By day I work on a production fintech app at PaySpot. On the side I ship small businesses’ shops and sites end to end — from Figma to Docker.

CORE STACK

TypeScript (Signature) · **Angular** (Expert) · **React** (Expert) · **Next.js** (Expert) · **CSS architecture** (Signature) · **Playwright** (Expert) · **Design systems** (Expert) · **Figma to code** (Expert)

Full, evidence-linked list in the skill tree.

EXPERIENCE

Freelance developer · Freelance, via Dušan Selaković’s agency — Sept 2026 – present

- Union-Medic: a bilingual Next.js site for a pharmaceutical company, from Figma to Docker.
- 61 pull requests in the first engagement, each with tests and a written rationale.

Founder · Kafe za Vas — Feb 2024 – present

- Built the shop, the API and the admin myself: catalogue sync, pricing, orders, shipping.
- Run the business side too: purchasing from the UK supplier, customer contact, deliveries.

Medior Software Developer · PaySpot d.o.o. — Feb 2023 – present

- Owned core features end to end and contributed to architecture decisions across the app.
- Helped start a greenfield company app from (almost) day one.
- Led a full UI refresh: layout, styling, reusable components and consistency.
- Built a Scrum reporting system used in day-to-day planning.

Quality Assurance Engineer · Zeto EU Kft. — Oct 2021 – Sept 2022

- Automated documentation with custom Google Apps Script functions, then tested and validated them.
- Built an electronic inventory system.
- Took part in an FDA audit and trained internal staff.
- Created and maintained the KPI system.

Translator & Social Media Manager · Ovation BBDO — Jul 2020 – Jun 2022

- Translated advertising from English to Hungarian.
- Managed communities and wrote monthly metric reports.
- Handled technical support.

SELECTED WORK

Union-Medic · Freelance developer, via Dušan Selaković's agency — Sept 2026 – present

The agency's Figma design built as a Next.js site that serves Serbian on union-medic.rs and English on union-medic.com from one codebase, with an article admin for the client's editors.

PaySpot · Medior Software Developer — Feb 2023 – present

My day job: UI engineering and architecture on a production fintech app, internal tooling and mentoring. Most of it is under NDA — this is what can be said, and the [redacted] stays inside.

Kafe za Vas · Founder & sole developer — Feb 2024 – present

My own online shop for coffee capsules, tea and syrups bought in the UK and sold in Serbia: a catalogue that syncs and prices itself every day, pre-orders confirmed over Instagram, and an admin that runs the whole order lifecycle.

Vinted Package Tracker · Sole developer, full stack — Sept 2026 – present

It began as a Google Apps Script over Gmail and a spreadsheet. A month later it is a full-stack app: a Fastify API on Supabase that reads the mailbox in real time, a mobile-first React app with push notifications for both owners, a shared core of tested business rules, and a Chrome extension for the one carrier without an API.

Ravioly · Designer & developer — Oct 2026 – present

A rebuild of a family business's old static site into a fast, fully prerendered Next.js site with a small web shop that fits how people in Serbia actually buy: cash on delivery or bank transfer, no accounts.

EDUCATION

BSc Computer Science · University of Szeged — Sept 2018 – Jun 2022
